

Shahid Hussain

Software Engineer (MERN Stack, React Native)

As a skilled MERN stack developer with 1 year of experience, I have a proven track record of designing and implementing high-performance web applications using MongoDB, Expressjs, React, Firebase, Mysql, bootstrap, JQuery, Nestjs and Nodejs. With expertise in front-end and back-end development, I am able to create scalable, secure, and efficient web applications that meet the needs of clients and end-users. I am experienced in working with RESTful APIs, integrating third-party libraries and services, and implementing real-time data streaming and socket-based communication. My strong problem-solving skills, attention to detail, and ability to work collaboratively with cross-functional teams make me an ideal candidate for complex and challenging web development projects. I am committed to staying up-to-date with the latest web development technologies and best practices, and delivering solutions that meet the highest standards of quality and performance.
